Show column data in rows

Posted by sudhi_muk@hotmail.com - 2015/09/25 07:58

_____

I would like to show my column data in rows - such as in an address / contact form

Example:
Normally a select query for an contacts table for name, phone, email shows data in a single row, such as

Name	Phone	Email
Abe Lincoln	1-234-5670	abe.lincoln....

I would like to show this data in individual rows as:
Name: Abe Lincoln
Phone: 1-234-5670
email: abe.lincoln....

I am using ARI Smart Content Data Table. I could alternately use the ARI Data Table if thats easier.
Any help appreciated. Thanks.
Sudhi

_____

 Found a way of getting the desired output by setting Revert Data option to Yes.
