
require_once failed to open stream Error message

Posted by maszek - 2015/12/15 13:24

Hello there,

As of today, I discovered that my site (www.regularrocker.nl) cannot be reached any longer. I'm getting the following error message:

Warning: require_once(/var/www/vhosts/regularrocker.nl/httpdocs/plugins/content/arismartcontent.php) : failed to open stream: Permission denied in /var/www/vhosts/regularrocker.nl/httpdocs/libraries/joomla/plugin/helper.php on line 133

Fatal error: require_once() : Failed opening required
'/var/www/vhosts/regularrocker.nl/httpdocs/plugins/content/arismartcontent.php' (include_path='.:usr/share/pear;') in
/var/www/vhosts/regularrocker.nl/httpdocs/libraries/joomla/plugin/helper.php on line 133

I am a novice to php, so I'm hoping someone can tell me how this issue can be solved.

I haven't made any changes to my website since a few months, so there were no alterations by me or other users.

Yours,

Maszek

Hello,

Check file permissions for /plugins/content/arismartcontent.php file.

Regards,
ARI Soft
