## Open URL based on ID?

Posted by Holbroom - 2016/01/06 16:21

---

Is there a way to format a row, so when clicked it will display a url based on a specific column ID?

so for example if the column ID named is "apples", you create a link called "Fruit", when clicked it opens a URL apples.html or something like that?

If this is possible could I make the link open in fancybox or sexylightbox? or one of the other Smart Content modules? just to make it look built in and professional.

Many Thanks :)

Hello,

Yes, it is possible. For example if want to create a link based on ID columns, options data source settings page and set "Columns settings -> ID" parameter to ID value and populate "Columns settings -> Format" parameter with the following value:

```
{ $columns:ID }
```

You can read about it here in description of "Format" parameter.

Thank you, is there any way to open the URL within a sexy lightbox or fancybox?

Many Thanks

Thank you, meanwhile, If I purchased ARI colorbox, could I open the url inside colorbox? If so how would I do it?

Many Thanks.

It will not work if server side pagination is used. We will add support "ARI Smart Content" lightbox extensions for "ARI Smart Content - Data Table" application till the end of next week (16 January).

Hello,

It is implemented in "ARI Smart Content" v. 2.2.26. For example if want to open a link from a table into "ARI Smart Content - Fancybox", Open data source settings page, find "Columns settings" parameters section, set "Columns settings -> ID" parameter to id (or any other column for what you want to use links) and populate "Columns settings -> Format" parameter with the following value:

{ \$value }

Open "Lightbox Integration" tab on "ARI Smart Content - Data Table" module settings and set "Lightbox integration" parameter to "ARI Smart Content - Integration - Fancybox" value. Check that "ARI Smart Content - Integration - Fancybox" and "ARI Smart Content - Fancybox" plugins are enabled.

Regards,  
ARI Soft
