

ARI Smart Content, Data Tables add child rows

Posted by johnny@ejs.dk - 2016/02/03 20:44

Using your demo code:

{datatable}

Column 1
Column 2
Column 3
Value 1-1
Value 1-2
Value 1-3
Value 2-1
Value 2-2
Value 2-3
Value 3-1
Value 3-2
Value 3-3

{/datatable}

I am building a table from different sql sources and wish to include the child rows feature.

Can that be done?

Sincerely Johnny Ejs

Hello,

The extension doesn't support this ability.

Regards,
ARI Soft

Is it so, that it only works as a module? Not plugin?

Johnny

Some columns from the same data source can be shown as child columns in "ARI Smart Content - Data Table". For this set "Child column" parameter to "Yes" in data source settings for columns which will be child columns:
