## scroll horizontally to view the whole table

Posted by jrnegronvidal1510 - 2016/03/08 14:18

---

Hello. Question. How can I disable the "scroll horizontally to view the whole table" function in order to have the whole table in the screen width. Right now the Responsive function is active. Please see the attachment. Thanks

Hello,

Could you send a link to a page with the table?

Regards,

This problem with site template styles. For example with the following CSS rule:

```
#gkMainbody table {  
    display: block !important;  
    overflow: scroll;  
    padding: 30px 0 20px;  
    width: 540px !important;  
}
```

You can try to add the following CSS rule to a site template CSS file or to "CSS Styles" parameter in module settings:

```
#gkMainbody table.dataTable {width:100%!important;}
```

Hello. I did what you suggested to me but I don't think that made any difference especially with the "Scroll horizontally to view the whole table" string issue. At least I want to be able to translate the string.

Another thing is that I have two tables both with just two columns but for some reason the system does not display the same format. If you look my second and third tables both come from a csv file. Both files have just two columns. If you see the one that I think has a problem you can't sort the values on the table.

The message is added by site template. See the following CSS rule in /templates/gk\_news/css/mobile.css site template CSS file:

```
#gkMainbody table::before {
    content: "Scroll horizontally to view the whole table";
    display: block;
    font-family: Arial,sans-serif;
    font-size: 10px;
    height: 14px;
    margin-bottom: 10px;
    margin-top: -30px;
    width: 100%;
}
```
