Compatibility with Joomla 3.5 and PHP 7?

Posted by tmiller558 - 2016/03/29 04:52
_____

Is ARI Smart Content compatible with PHP 7 and Joomla 3.5? I was having some problems and I reinstalled ARITables and they work. But when I try to re-install ARI Smart Content the Admin component gets an error. It gives this error:
An error has occurred.

   0 Call to undefined function set_magic_quotes_runtime()

I think because I'm using php7, and magic quotes is deprecated, that we need to update some of the code in order to make it compatible with php7

Hello,

The latest version of "ARI Smart Content" (v. 2.2.28) is working fine with Joomla! 3.5 and PHP 7.

BTW, "ARI Smart Content" v. 2.x doesn't contain "set_magic_quotes_runtime" PHP code.

Regards,
ARI Soft

Thank you for your prompt reply!

OK, the magic quotes error message is gone.

Now when I have both components active and I switch to php7, I get this error when trying to access the admin component:

An error has occurred.
 0 syntax error, unexpected 'new' (T_NEW)

And the admin component wil not load.

When I switch back to php 5.6, that error message disappears.

I can give you access to the back-end if you want.

_____

Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

_____

Also, I noticed in my member download area is see this: ARI Smart Content: DataTable Pack v. 1.9.4

And not version 2.0. This is likely an issue as well!

How can I download the most recent version?

-Tom

_____

I just sent login credentials as requested.

Also, just send me an email when you want me to flip it to PHP 7 and I'll do so.

Thanks!

Tom

_____

"ARI Smart Content: DataTable Pack" is no longer supported (about 1.5 years since "ARI Smart Content v. 2.0 was released). Full version of "ARI Smart Content" is actively developed and it is compatible with latest Joomla! versions and PHP 7, but "ARI Smart Content" v. 2.x differs from v. 1.x. It uses another addons.

_____

OK Great. So I should just purchase the ARI Smart Content and install that? Should I uninstall data tables and stuff first?

_____

I went ahead and purchased Smart Content 2.0 and Quiz and Before/After.

Really enjoy these extensions!

Should I completely uninstall the datatables and smart content extensions before installing the new stuff?

_____

Thank you for your choice of our extensions.

About your question, uninstall old version of the extension and then install "ARI Smart Content" v. 2.2.28. Documentation of the extension is available here. Demo site is here. If you have any questions or suggestions, feel free to contact us.

Regards,
ARI Soft
