
ARI Smart Content - Fatal error.

Posted by nefachris - 2016/06/12 21:58

Hello, I got following message:

Fatal error: Cannot use object of type stdClass as array in

/home/.sites/422/site1413/web/modules/mod_aridatatables/includes/kernel/DataTables/class.DataTables.php on line 195

I use a *.csv-file, I do not find out what is wrong.

Please help.

Hello,

Could you send a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

I found the problem. With trying I had two different type of tables in one article.

This is not working:

```
{aridatatables moduleId="74"}  
{arimodule id="172"}{/arimodule}
```

Now I have an other issue, its the wrong thread but I won't open a new one.

I use a csv-file and I have a big table with a lot of columns. I don't want to show all.

So I have tried the column setting "hidden", it doesn't work.

Other functions like "Alias", "Align" or "Format" working fine.

Whats wrong?

Please help.

Could you send screenshots of data source and module settings and a CSV file by email so we can try to reproduce the problem on our test server or provide a link to a page where the problem occurs and a temporary access to Joomla! backend?

Regards,
ARI Soft
