
print iFrame in embedded doc

Posted by Laurent Zotto - 2016/09/10 13:49

Hello

I'm using Ari-Smart content to display embedded doc in iFrame.

I want to add to each embedded doc a print button, that only prints that specific doc!

What's the best way to do so?

Thank you in advance!

Best regards
Laurent Zotto

Hello,

You can add a print button outside and attach the following javascript to it:

```
window.frames.focus();window.frames.print();
```

Just replace FRAME_NAME with name of element. A sample button:

Print

Hello

I tried this, it does not work. I get the button, but it's not opening a printing dialog when pressed!

I also tried to add this to the html code attached.. same print behaviour as above
Here is my original code:

```
{aridoc engine="iframe" width="100%"}joomla/import_fltt/Fengig_1_CH_SEN_ranking.html{/aridoc}
```

```
{aridoc engine="iframe" width="100%"}joomla/import_fltt/Fengig_1_CHALL_ranking.html{/aridoc}
```

Attached is the files: Fengig_1_CH_SEN_ranking.html
the 2nd file is blank for this team

I tried in joomla on the article Options to state show print button, this does not work either!

I also tried to add this to the html code attached.. same print behaviour as above

Send a link to a page where we can see the problem with "Print" button.

The button is located on a page inside element. In this case the following code can be used for the button:

Print

Hello

I managed to add the print button..
<http://laurentzotto.familyds.org/joomla/fr-fr/club/team>
by adding this to the code:

Tank you for your help
