## Searching errors with server side paging on

Posted by robertbrandes - 2016/09/17 00:08

---

Under some conditions, turning on server side paging, search does not work and some columns do not sort. See [http://wmb.elginroots.com/index.php?option=com\\_content&view=article&id=101&Itemid=510](http://wmb.elginroots.com/index.php?option=com_content&view=article&id=101&Itemid=510). In this instance, the first two columns will sort but the rest will not, and search does not work at all.

Hello,

Download and upgrade the extension.

I am having the same issue with version 2.2.32

Search works fine with server pagination off but fails with a 500 error as soon as you type in search box with it on

Hello,

Could you provide a link to a page where the problem occurs and an SQL query which is used?

---

The SQL query is

```
SELECT user_id, `cb_slname`, `cb_sldname`, `cb_va_status`, `cb_days_since_registration` FROM `#_comprofiler`  
WHERE cb_va_status NOT LIKE '%rejected%' AND cb_va_status ""
```

---

The page you can see the behaviour is <https://www.test.victoria-academy.com/aridata/current-members-list>

There are two tables on this page one with Serverside Pagination Off where search works and one with it off where it fails.

Regards

Adrian

---

Temporary use the following query:

```
SELECT user_id, cb_slname, cb_sldname, cb_va_status, cb_days_since_registration FROM `#__comprofiler` WHERE  
cb_va_status NOT LIKE '%rejected%' AND cb_va_status ""
```

You can also upgrade the extension to v. 2.2.33 and use the previous query.
