## Two table Tabs

Posted by taoh - 2016/10/08 22:01

---

Hi

I have a tabset working. getting the data from a table for the actual tabs.

Now I would like to have the contents of each tab get its data from a different table and display a list with that data, so how do I do it.

Desired look is in attached file

Cheers

Hello,

Could you specify what plugin code you use? Are tabs created from Joomla! articles, database data or manually?

Hi

The data is in two database tables

Source 4

```
SELECT t_id,t_title,t_use,t_order,t_note1,t_note2 FROM #__gsd_tabs
```

Source 5

```
SELECT t_id, L_title, l_url, l_extra from from #__gsd_links.
```

t\_id is common to both

The code I currently have is

```
{tabs source="4" titleTemplate="{ $t_title}" itemTemplate="{ $t_note2}" }{/tabs}
```

I need to fill the page of a tab as follows

source4->t\_note1

```
/* varying number of items */
```

```
-
    source5->l_titlesource5->l_extra
```

source4->t\_note2

Cheers  
Taoh

The extension doesn't support this ability.
