
Carousel slider

Posted by Mogwai - 2017/02/11 14:53

Hello,

How can I manage that the position of a slider is a bit more above in an article? I have put the code right behind the logo image, but the distance is too big for me.

{loadposition xx2}Â
You can see it online.

And second: I cannot get the title and description running even though I placed the files in the image directory as well as into smart content. (description.en-EN.csv as well as description.en-EN.ini)

Thanks in advance for any hints.

Regards,
Mogwai

Hello,

You can play with values of "X pos", "Y pos", "X radius" and "Y radius" parameters in module settings.

About titles and descriptions, could you provide a temporary access to your J! backend by email so we can check settings?

"ARI Smart Content" uses CSV files (not INI files) to define titles, descriptions and other fields for images. Read here description of "Description file" parameter.

Hello,

I have a new problem with the ARI Smart Content Carousel Slider:

I have set up two Cloud Carousels with ARI Sexy Lightbox integration. The only difference is that the previous was made with "ARI Cloud Carousel" and the new one with the problem with "ARI Smart Content Cloud Carousel". It works well in this site (except the description does not appear) but in the new one the sexy lightbox opens but no pictures inside (there I have the title and description displayed).

In Smart Content component I have added everything (new media data with image directory and description file), everything is on the server in the correct directory.

I am searching for the mistake for more than an hour now but can't find it. Please help me to get the sexy light box integration running and the navigation cursors in my defined color.

I'll send you the login dates again. Thanks in advance.

Regards,
Mogwai

Hello,

See "Link" column in CSV file. The lightbox opens URLs from this page.

Hello,

Yes, I know - I copied the structure from the CSV file which is used for the correctly working carousel in the main page. Just changed the files and description. I have nothing written into the link column:

```
"File","Title","Description","Link"  
"001.jpg","aaa","description a",""  
"002.jpg","bbb","description b",""  
"003.jpg","ccc","description c",""  
"004.jpg","ddd","description e",""  
etc
```

For both carousels the description files look like this, and still in the one which works it does not disturb that the link column is there - the sexy lightbox opens.

?????

Regards,
Mogwai

Ok, I tried something which should not work: description file is now an .ini file and now the photos are shown in the sexy light box. That is too strange.

"Link" column has values in images/slider-memory/description.de-DE.csv file.

But that was not used. As description in the recent carousel was entered "description.csv". I changed it to the "description.ini" and now it works - locally and online. That file is not even in the directory anymore. It is strange!

Thank you,
Mogwai
