Grid from multiple tables in DB.

Posted by nemuelcruz - 2010/08/01 08:39

_____

Hello, I just purchased this component and I need to create a small table report from multiple tables in my joomla database.

How can I accomplish this?

I am using the DataTable Pack v. 1.7.5

Please help

_____

Hello,

You can use join statement in SQL query for joining several tables. If you provide information what data from what tables you want to display we can help create SQL query.

Regards,
ARI Soft

Hi Admin,

Thank you for your prompt response.
:)

Could I bother you via PM?

_____

its a custom component. Is there any way we can communicate directly?
msn/skype?

_____

Hello all, Can someone post a sample on how to display fields from different tables using this component?

Thank you

_____

If you want to display col1 and col2 from table 1 and col3 from table 3 and col4 is foreign key for these two tables, the following code can be used:

{arisqltable}
   {arisqltablequery}
SELECT T1.col1,T1.col2,T2.col3
FROM table1 T1,table2 T2
WHERE T1.col4=T2.col4
   {/arisqltablequery}
{/arisqltable}

If you provide structure of your tables, we can help create query for your needs.

Regards,
ARI Soft
