
link in database is changed

Posted by Marsm - 2017/03/16 09:44

Hi,

I have a column with links, like <https://www.website.com>.

These links are changed to <https://www.mysite.com/https://www.website.com>. So the links are not working anymore.

See example here, click/hover on Bekijk/Bestel.

I can't find the cause of the problem. Have you any suggestions?

Thanks,
Marsm

Hello,

Open data source settings page and check "Columns settings -> Format" parameter.

In the database, for this column I have this data: Bekijk/Bestel
The "Format" parameter is empty.

I use this same setting for another site and there I have no problem.

Could you provide a temporary access to your Joomla! backend by email so we can investigate the problem?

This problem with links which are stored in database. They look like:

[http//domain.com](http://domain.com)

but it should be:

<http://domain.com>
