
ARI smart content license update

Posted by mikerees - 2010/08/02 06:37

When I updated my production licence number I received the following error on next connection to site:

Fatal error: Cannot redeclare adonewconnection() (previously declared in /home/dize/public_html/administrator/components/com_arismartcontent/kernel/DB/ADODBLite/adodb.inc.php:3) in /home/dize/public_html/cms/include/class/adodb/adodb.inc.php on line 137

??

Hello,

It seems your site and the component use the same PHP library for connecting to remote database. Could you provide temporary access to your Joomla! backend by email that we can investigate this issue more deeply?

Regards,
ARI Soft

The problem has been resolved - it did not relate to ARI smart content - rather Open Reality CMS - thanks for your assistance
