
Link in jTable

Posted by marcelloba - 2010/08/04 23:46

Hello, I am using a SQL table wrapped in a jTable, what I would like to do is to show a list of both articles and kunena posts in a list, with the title linked to the article. At the moment my code in the module is:

```
{arjdatatable bPaginate="true"}
{arjsqltable}
  {arjsqltablecolumns}
    {arjsqltablecolumn id="DATE" alias="Date" width="15%" className="idg"}
    {arjsqltablecolumn id="CAT" alias="Category" width="15%" headerClassName="head"}
    {arjsqltablecolumn id="TITLE" alias="Title" headerClassName="head"}
  {/arjsqltablecolumns}
  {arjsqltablequery}
SELECT FROM_UNIXTIME(time) AS DATE, 'POST' AS CAT, subject AS TITLE
FROM #__fb_messages
UNION
SELECT created AS DATE, 'ARTICLE' AS CAT, title AS TITLE
FROM #__content
  {/arjsqltablequery}
{/arjsqltable}
{/arjdatatable}
```

I have tried to use sql CONCAT to add an `<a>` tag to make the link, but it seems that html tags get stripped off the list. Is there a way I can make the title column entries linkable?

Thank you

=====

Nevermind, resolved, I just needed to enable html tagging in the plugin screen.

Hello,

Sorry for the delay. We are glad that the problem was resolved.

Regards,
ARI Soft
