
Use Datatable / SQL to updte database

Posted by CSSDAweb - 2017/12/06 16:04

I'm currently using a data table to retrieve and display data from a csv file. It works great for displaying the info on the front-end. Now, I would like to be able to use the table to edit and update the content of a datasoure either by exporting a csv file or better, use SQL to update a database. I noticed that questions used with the ARI Quiz can be imported / exported. It there a way, using an ARI product to achieve the same results for data stored in a database?

Hello,

Sorry, but we don't have this kind of the extension.

Regards,
ARI Soft
