
Hide a column / possibilities of format function

Posted by HeinzP - 2018/07/14 13:41

Hi there

I have two questions around the usage of the excellent tool ARI Smart Content once again:

- What do I have to change to really hide a column (which is used for the sort already):
 - . Columns settings for this field is already "Yes" for "hidden"!
 - . Field 'sort' on <http://kb.ghgo.ch/abfrage>
- Where are the limitations or possibilities with the "Format" field within the columns settings?
 - . I have a field type string with an URL OR a defined fixtext "nur auf Film im Staatsarchiv"
 - . For the URLs I would like to use this format rule: {\$value}
 - . Would there be any solution to exclude the link building for the defined fixtext?
 - . Field 'www' on <http://kb.ghgo.ch/abfrage>

Would be great to get your advice!

Thanks a lot
Heinz

Hello,

1. Could you explain in more details what's wrong when "Hidden" parameter is set to "Yes"?
2. The extension doesn't support ability to use conditional expressions for "Format" option.

Regards,
ARI Soft

Hi there,

- 1) Attached you'll find the details about the column details - for field 8 (sort) I have chosen "yes" for the parameter "hidden" but this column is still displayed on the view on <https://kb.ghgo.ch/abfrage>.
=> "Hidden" is set
=> Column is not hidden
- 2) Thanks for the feedback. Maybe I should change from CSV file to a SQL database and the their existing possibilities.
