Data table module failing

Posted by iatcb - 2018/11/29 17:02

_____

Hello,
We have an article on our web site that uses a data table to display dome events. It has been working for several years, however recently it has stopped working and when the server error reporting is set to "Development' I see the following error:

Fatal error: Cannot make static method Joomla\CMS\Helper\ModuleHelper::getModuleById() non static in class AriModuleHelper in /u3/sidprice/public_html/iatcb.org/administrator/components/com_arismartcontent/kernel/Module/j16/class.ModuleHelper.php on line 0

Please advise how to resolve this problem.

This is using "ARI Smart Content" v. 2.2.37

Thanks,
Sid

_____

Hello,

Download the latest version of the extension (2.3.1) in "Member Area" on our site and update it on your site.

Regards,
ARI Soft

Thank you that resolved the issue.

Why do the updates that are available automatically appear in the Joomla backend?

Sid
