
Using Data, ARTICLES can we select articles by TAG

Posted by rusesadmins - 2019/05/03 15:34

On the Data builder, where you can select by articles...

Can you select the ARTICLES by TAG?

Can you choose to display specific CUSTOM FIELDS in the output?

thanks!

Hello,

Sorry, but articles data query builder doesn't support ability to select by tags.

About custom fields, could you specify the widget (tabs, accordion or another) which you use the created query?

I was hoping to create a 'list view' in smart content, using a table...ideally..

1. select articles by tag
2. include specific custom fields in the display

But since we can't select by tag, at least for now, it doesn't help...although we could probably create the sql statement to build it manually.

Hello,

The following SQL query can be used if want to select articles with "Red" or "Green" tag:

```
SELECT
  C.*
FROM
  #__content C INNER JOIN #__contentitem_tag_map TM
    ON C.id = TM.content_item_id
  INNER JOIN #__tags T
    ON TM.tag_id = T.id
WHERE
  T.path IN ('red', 'green')
GROUP BY
  C.id
```

It can be used with "DataTable" widget to show articles in a table view. Repeater plugin can be used if you need a

custom layout.
