
Is ARI Smart Content ready for Joomla 4?

Posted by rusesadmins - 2020/06/22 16:20

We are currently evaluating all of our extensions.

What are your plans for Joomla 4? Does ARI Smart content already work in Joomla 4?

thanks
Rutgers Admin Team

Hello,

Currently the extension doesn't support Joomla! 4.

Regards,
ARI Soft

When do you expect to have ARI Smart Content ready for use with Joomla 4. We are starting to build a new site and want to use your extensions with Joomla 4.

Hi:

Please add me to that request. Actually is a delay to update to Joomla 4 unless I find an (Ari Smart Content) equivalent which will be difficult. IF you can advance the Joomla 4 compatible date will be appreciated! Been using your extension for years have legacy data and migration to other data solution will take lot of work.

Want to upgrade website to Joomla 4.

:dry: ;)

Is there a plan for ARI Smart content to work for Joomla4?

I see others are asking for the same request.

thank you!

It would be really helpful to have an idea of the timescales.
I don't have to move to J4 yet, but I will sometime and I need to know when extensions will be ready.
Thanks

It's not only about J4 but also PHP8. I sent the developer an email a while ago about this exact topic, I didn't get any reply. Seems the developer is going to abandon most of the Joomla plugins, it would be great to know if he keeps at least a few and which ones exactly. I don't have an issue if the upgrade isn't free and I have to buy the new versions but the lack of information and schedule makes it hard to support/recommend this developer.

Hello,

We are sorry for inconvenience, but we don't have an ETA when the extension will be ready for J4. Approximately it takes several months.

Regards,
ARI Soft

I'm sorry to bug you too.

I work with ARI Smart Content v. 2.3.3, only use the Datatable function and have to upgrade my website from Joomla!3 to Joomla!4.

Is there already a solution that can run on Joomla!4 - or is there a forecast when this might be available? Your product is so great that I would like to continue using it.

Thank you.

Hi:

I am also interested in the J4 version with support for PHP 8.1. Have a site which significant content is based on this extension. Also, willing to help beta testing. All of my sites moving into Joomla 4.

Thanks in Advance!!

Latino

It's really a shame that we don't hear anything here!

Since I urgently need to update a page to Joomla!4, I am now trying Tabulizer (<https://extensions.joomla.org/extension/tabulizer/>).
