
Ari Datatables is not working

Posted by murugappan - 2021/04/05 02:33

I just purchased the ARI Smart content and tested the datatable component. I am quite sure i defined everything correctly but the output is empty when the db table has many rows. Please see attachments.

Hello,

Try to set "Debug" parameter to "Yes" in connection settings. It can help to investigate the problem. Try also switch "DB Type" to "MySQL (mysqli)".

Regards,
ARI Soft

Hi Admin,

Thank you so much. Its working great now. See attached image. The problem was in the type. Need to understand the usage.

On side, why is there an option "mysql"?

It offers two options for MySQL because PHP offers two different libraries for work with MySQL.
