
Tabs

Posted by Lionel - 2010/08/31 21:38

I am completely new to all of these components. I am using at www.saludablespr.com tabs&slides from joomla works but when I saw yours I bought Ari Smart Content but really I am completely lost. What I want is to simply divide the articles in tabs. In tabs&slides what I do is very simple. eg:{tab=Title}Article Text, if I want another tab {tab=Another Tab}More Article Text; and to close the tabs {/tabs}

Well I want to know how can I do the same thing with Smart Content and where can I select the Theme. It may sound silly but I am completely lost.

I will really appreciate any help.

Hello,

If you want to type content for tabs manually, use the following code:

```
{arijtabview}
{arijtab title="Tab 1"}
    Content 1
{/arijtab}
{arijtab title="Tab 2"}
    Content 2
{/arijtab}
{arijtab title="Tab 3"}
    Content 3
{/arijtab}
{/arijtabview}
```

The theme can be selected on 'Components -> ARI Smart Content -> Plugins -> ARI JQuery UI Loader' page in 'Default jquery UI 1.5.2 theme' drop-down.

PS: If MooTools javascript library is used into your site template, open 'Components -> ARI Smart Content -> Plugins -> ARI JQuery Loader' page and set 'No conflict' option to 'Yes'.

Regards,
ARI Soft

Thanks for your reply.

I did what you tell me but it is not working. Tags are vible in the post and no tab is visible. eg:
{arijtab title="QuĐ¹ Es"}Content
{/arijtab}

You can take a look at:<http://saludablespr.com/>
Yesterday I did send you Joomla backend access if you need so.

I need to solve this urgently, My client is getting mad and wants his money back

Try now, please. You used incorrect close tag for 'ARI JTabView' plugin, it should be `{/arijtabview}` instead of `{arijtabview}`.

Thanks. Is it possible to edit CSS so that Titles and text be Arial 12 points. You know now tabs looks too big and the text the same. If so let me know

Open 'CSS Templates' section on the component backend and create 'CSS Template' with the next code:

```
ul.ui-tabs-nav LI a span,  
DIV.ui-tabs-panel  
{  
    font-family: Arial;  
    font-size: 12px;  
}
```

PS: Don't forget to enable template.

Regards,
ARI Soft
