
Can't install: Non-static method AriKernel::init()

Posted by jentoo - 2021/07/16 08:03

I have just repurchased this component but when I try to install I get this error:

Non-static method AriKernel::init() cannot be called statically

The download version that's available in my Member area is 2.3.3 but the files seem to be quite old, I am wondering if this is the latest version?

I cannot see any other place to download it from

Thanks

Hello,

Do you use PHP 8.x? Currently the extension is not compatible with PHP 8.x

Hi yes it's not one I host but I can see now that the client's hosting company must have upgraded to 8.

I'll see if I can get it reverted.

Thanks

Best regards
Jennie

When do you expect the extension to be compatible with PHP 8?

Thanks x

Thanks, I don't have access to the web hosting so currently trying to obtain that.

I should be able to get the PHP version changed once I do. I don't use that version yet on any of my own hosted sites.

Best regards

Jennie
