How to use Joomla User ID in SQL Query
Posted by craigyg4t - 2021/08/30 14:52

_____

Hi

I am still new working with Joomla, and love your extension's DataTables. I have the following DB Query which works, but I am trying to make it dynamic to the current user:

SELECT
kech_Facility,
kech_tag

 FROM `KE_db1` as k INNER JOIN track_db2 as tr on k.kech_Group=tr.hsj_hs_Name where tr.hsi_j_key=923 and kech_Facility is not null order by kech_Facility asc, kech_Location asc

in the query the part tr.hsi_j_key =923 uses the joomla id (in this case hardcoded to 923)

Any help would be greatly appreciated

Craig

_____

Hello,

Use {$UserId} predefined variable:

SELECT
kech_Facility,
kech_tag

FROM `KE_db1` as k INNER JOIN track_db2 as tr on k.kech_Group=tr.hsj_hs_Name where tr.hsi_j_key={$UserId} and kech_Facility is not null order by kech_Facility asc, kech_Location asc

Regards,
ARI Soft
