
hiding code from pdf / print

Posted by framework - 2010/09/07 08:39

Hi there. Is there a way to stop the stuff in curly brackets - for instance with jtabview - so the content is put in using standard joomla pdf button but you don't include the tab seperators?

Thanks

Hello,

This is Joomla! limitation. It doesn't process content plugins in PDF document. Check you mail, please. We have sent plugin which removes this limitation.

Regards,
ARI Soft
