Error on page when I use data table in an article
Posted by mniederm - 2008/12/29 15:26

_____

Hi,

I have installed the ARI Smart Content and then I have tried the easy data table example and get an error message on my page.
When I display a article with this data table the other scripts on the side will not work.

for details see message on the buttom left hand side --> http://www.aktionsfinder.at/aktionsfinder/alle-aktuellen-aktionen.html

I use Microsoft Internet Explorer

regards Michael

_____

Hello,

We have already written to you regarding this issue by email.

Most probably this is because you have mootools.js included in your page. Setting JQuery javascript library to run in no-conflict mode should solve the problem. Please try Components-> ARI Smart Content-> Plugins -> ARI JQuery Loader -> No conflict -> Yes.

Regards,
ARI Soft

_____

I'm having the same problem in Internet Explorer, even though ARI JQuery Loader is set to YES. What do I do?

_____

I'm having the problem on this page:
http://anchor-recording.com/beta/studio1-eqlist

and others like it.

_____

Sorry, but it isn't ARI Smart Content issue. It's issue in javascript file from your template. You can find this file by the following path:

/templates/anchor/js/pngfix.js

It contains the following code:

if ((version >= 5.5) && (document.body.filters))

but it's incorrect in your case because including of this file comes before tag and document.body.filters expression raise error because document.body is null.

Regards,
ARI Soft

_____

So if I get this right. I need to let my script PNG fix execute in the body and not the head tag?

_____

Yes, move this inclusion under tag.

Regards,
ARI Soft

_____

I removed the script all together from the page and still have the same error :(

_____

Think I found the problem. jQuery was being loaded into the page more than once. Once by your addon and another by a script I wrote.

Thanks!
