## Instructions? Docs?

Posted by JohnHorton - 2009/01/11 22:42

---

You don't need technical knowledge to use the power of.... Ok so how do I get started? Everything is installed. Now what? I have a bunch of plug-ins and no clue how to do anything.

Hello,

smart.ari-soft.com contains description and usage examples for all plugins. Just select the plugin you want to use and see related information.

Please let us know if you have any questions.

Regards,  
ARI Soft

I have surfed the site quite a lot and have seen the demo pages. I am yet to find explicit instructions for implementation. I see the HTML code listed in the plug-in settings, do I need to paste that into an article?

I am sure that once I see what to do it will be great but at this point I am totally lost.

All you need after installation is to add appropriate tags to your articles.

Let's suppose you want to add scroller to your article. Then you should just open your article, look at appropriate example and add the tag to your article:

```
{arijscroll
width="100"
height="100"
speed="0"
delay="0"
skin="dotted "
className=""
direction="up "
ignoreLeave="true"
alternate="true "
stopOnMouseMove="true "
fontsize="0"}scrolling content{/arijscroll}
```

The same approach can be used for all ARI Smart Content UI effects.

Ok so all I really want to is use the CSV functions. So i pasted this into an artical

```
{arijcsv2table url="csv_file_url" select="1,2,5"}
```

I then replaced "csv\_file\_url" with "http://www.ballofspray.com/joomlaDev3/Book1.csv"

I expected to find my data in a table ... got nothing.

As I said before I can see from the demo that this software works but I do not see ANY real documentation.

Sometimes you have to spell it out....

csv\_file\_url parameter should be relative, for example if you have this file in %Joomla\_dir%/data/Book.csv then  
csv\_file\_url="data/Book.csv".

If you still experience difficulties with this you can provide us with access to your Joomla! back-end and we will try to help (please send credentials by email). We try to do our best to support our customers. There is smart.ari-soft.com site that is devoted to ARI Smart Content extension and its plugins.

Several customers purchased this extension and few of them experienced difficulties. We try to help them and as the result you can read their opinions and reviews in Joomla! extensions directory.

If anyway you find this plugin useless for you and want a refund just let us know.

Regards,  
ARI Soft
