
Image Map with ARI JDialog popup

Posted by mariner - 2010/11/04 16:51

Hello,
I wonder if anyone has built an image map where the links within the image map pop up in an ARI JDialog style popup window?

... Or if anyone knows off hand how to activate the JDialog box instead of just including an href link?

.. or if anyone has a different solution for a similar result?

Thanks!

Hello,

Unfortunately "ARI JDialog" plugin doesn't provide this ability because it can't load external pages, but this feature can be implement with other our extensions:

1. If use "System - ARI Sexy Lightbox" plugin from ARI Sexy Lightbox code will look like:

2. If use "System - ARI Colorbox" plugin from ARI Colorbox code will look like:

3. If use "System - ARI Fancybox" plugin from ARI Fancybox code will look like:

4. If use "System - ARI Pretty Photo" plugin from ARI Pretty Photo code will look like:

Thanks for the detailed reply... sold.. I'm just deciding which one.

And one more question... your reply clarified what i'm trying to do...

I'm actually just trying to pull up some html content within the JDialog box.

... in that case would JDialog work? If so what would the code be for that?

...edit.. I'm playing with colorbox; I can bring up an external URL; how would the imagemap code change to bring up inline content?

Thank You.

Hi,

I'm hoping you can help me please.

I'm trying to do a similar/same thing as 'Mariner' in that I want to have my image map throw up lightbox images as pop ups rather than navigate to a new page.

Where would I input the code you have shared below?

Currently, the code I have for my image map is:

Should I be replacing the "javascript:void(null);" with your code??

Sorry for the stupid questions - very much the noob here.

Many thanks

Jon

Hello,

Specify please what extension do you use?

Regards,
ARI Soft
