
ARIJTABVIEW change font format

Posted by mniederm - 2009/01/14 21:55

Hi,

I use ARIJTABVIEW in combination with arijdatatable and ...
ARIJTABVIEW changes the font settings which I had with arijdatatable and I can't find where I can switch this off.
Please see example page <http://www.aktionsfinder.at/aktionsfinder/brot-a-gebaeck.html>

I want to have the same text setting inside of arijtabview like it is on the tabel above.
How can I make this? :(

Michael

Tab View has ui-tabs-panel CSS class defined here:
http://www.aktionsfinder.at/aktionsfinder/plugins/content/arismartcontent/system/ari_jquery_ui_loader4957ec73d0fcf/js/1.5.2/themes/smoothness/smoothness.all.css

This class overrides font settings from table.

Probably the best way is to define ui-tabs-panel class in your CSS with the following settings:

```
.ui-tabs-panel {  
font-family:Arial,Helvetica,sans-serif !important;  
font-size:1em !important;  
line-height:150% !important;  
}
```

This will override Tab View default font settings and set them as they are defined in table. This approach will let you avoid problems with possible future extension updates.

Hi,

it is not possible to change the permissions on this file and
therefor I can not change the tab-panel setting in file uisite.all.css.
Is therer a protection from you side that I can't change permission, because
on every other file, folder ... except ari stuff I can change permissions.

We advise you not to change this CSS in one of files of ARI Smart Content. You should probably add this CSS to the CSS file your template or page is using. In this case default tab view font settings will be overridden and this should solve the issue.
