
No joy with Panacea Template from Rockettheme

Posted by bjamieson - 2010/11/08 21:36

Hi,

I've created a site that I need to display/sort/search table data.

The site uses the Panacea theme from Rockettheme. It works well with various extensions except for my data tables.

I have not put the test page on public access since it is just not 'right'.

Aspects that fail immediately include, arijflexgrid, arimootable, sorting 'icons' and so on. I've tried no conflict with jquery libs, but I'm not getting the results I expect.

<http://www.fioga.co.fk/results.html>

Testuser details available...

Hello,

Could you re-send user details because we haven't received it?

Regards,
ARI Soft

It seems this problem with WYSIWYG editor because it wrapped {arijflexgrid} with tag. It looks like:

{arijflexgrid}

but this is incorrect. Switch editor to plain text mode and enter plugin code. This should help.

Hi,

I did wonder about that type of problem, and I tried a combination of

- 1) 'No editor'
- 2) Rokpad plain text editor
- 3) Going into 'source' mode (jce 1.5.7.4 is my preferred editor, and you can override its 'fancy stuff' by clicking on 'Edit Code').

I now get a different error:

Webpage error details

Message: Invalid argument.

Line: 23

Char: 1286

Code: 0

URI: http://www.fioga.co.fk/plugins/content/arismartcontent/system/ari_jquery_loader4c9cf41898d93/js/1.2.6/jquery.min.js

But my AriTable JQuery plugin parameters are set as:

No conflict = yes

Need JQueryLoad = yes

Default JQuery Version = 1.2.6

Could you provide temporary access to your Joomla! backend by email that we can investigate this issue in more details?

Regards,
ARI Soft
