
Error when Smart Content & Easy Slider are active

Posted by krentzis - 2010/11/10 18:41

Hello,

I have both Smart Content & Easy Slider installed.

the front page of my site (runs local for the moment) has an easy slider module running and it runs fine when I have the easy slider plugin active and smart content plug in unactive.

If I activate the smart content plugin I get

Fatal error: Cannot redeclare class AriJoomlaArticleController in

Z:\xampplite\htdocs\website.com_2010\modules\mod_arieasyslider\includes\kernel\Articles\class.ArticleController.php on line 20

can you please advice

thanks

=====

Hello,

Download "ARI Smart Content" and "ARI Easy Slider" in "Member Area" on our site, re-install "ARI Smart Content" component and upgrade "ARI Easy Slider" module. It should resolve the issue.

Regards,
ARI Soft
