

Data table causing javascript error

Posted by danraymo - 2010/11/15 13:34

I'm getting javascript errors on any page I use arijdatatable, there is some sort of conflict with the template I'm using and perhaps mootools. The only effect I can see that the errors have, is that when on those pages on an iphone (it then uses a mobile template) the iphone menu bar doesn't work on those pages.

Example of page with problem: <http://mypils.com/conferences>

This is well beyond my javascript abilities, hopefully a trained eye might be able to see the problem. Thanks in advance for any help. -- Dan

Please ignore post... was able to solve problem by change parameter of ARI JQuery Loader "no conflict" to "yes"

Thanks

Dan
