
Fatal Error!

Posted by Billy Cox - 2010/11/23 09:52

After installing I get a white page with an error

Fatal error: Call to undefined function sefreltoabs() in

/home/aboveau/public_html/templates/ja_rochea/ja_menus/Base.class.php on line 96

If I refresh my browser page it comes right.

If I disable the plugin the error doesn't appear at all

Enable again and error re-appears

Any help would be appreciated as I need to get this working properly quickly.

Thanks

Billy

Hello,

We have sent the following replay by email:

It seems this conflict with site template default menu. Could you provide temporary access to your Joomla! backend by email or /TEMPLATES/JA_ROCHEA/JA_MENUS/BASE.CLASS.PHP that we can investigate this problem in more details?

Regards,

ARI Soft

Hello,

i have installed jwiki and i have the same problem. :blink:

Call to undefined function sefRelToAbs() in /home/...../html/templates/ja_larix/ja_menus/Base.class.php on line 95

could you help me pleeeasse... i cannot reinstall joomla because i modified a lot of files.

thank you in advance :)

Joomlo

Quick answer ! wow !

thank you :) i could finally fix it.

Just need to use "JRoute::_" :

```
$row->link = JRoute::_($row->link);
```

u might have the same problem with the function "amReplace".

Can fix it we same "JRoute::_" :

```
$row->url = $row->url = JRoute::_($row->link);
```

i hope i will help some of you.

Thank you again to ARI. :)
J.
