
Ari ZohoSheet

Posted by goncalo - 2009/01/20 18:04

Hi,

I entered the parameters:

```
{arizohosheet urlorname="true" username="aulaforex" sheetname="Simulacion_1000"/}
```

and it's displaying the homepage of my site, instead of the spreadsheet in Zoho

In the component settings it's set to get the file by user/name.

Do I miss anything?

Thanks in advance
gonD·alo

Hello,

We are working on fixing this. Could you please try to use the code during this time:

```
{arizohosheet urlorname="false" url="http://sheet.zoho.com/publish/%username%/%sheetname"/}
```

Also please make sure that sheet with such name exists and it's published.

Regards,
ARI Soft

There was a mistake in plugin description. The correct is:

urlorname - Sheet can be displayed by loading URL into iframe or by getting content via Zoho user name and sheet name. Values: 1 (user name and sheet name), 0 (URL).

So please use the code as shown below:

```
{arizohosheet urlorname="1" username="aulaforex" sheetname="Simulacion_1000"/}
```

Hi,

the code:

```
{arizohosheet urlorname="false" url="http://sheet.zoho.com/publish/%username%/%sheetname"/}
```

works well. But I have to make public the file in Zoho.

If I prefer not to make it public and use instead:

```
{arizohosheet urlorname="true" username="aulaforex" sheetname="Simulacion_1000"/}
```

What parameters do have to be set in the component-plugin-update?

I tried with and without introducing the username and the sheetname, only stating the "User name and sheet name" preference, but still it gives an error:

"Sorry, No Such Document available as public "

The file is still public thought.

Thanks in advance

Instead of 'true' you should use 1 for urlorname parameter:

```
{arizohosheet urlorname="1" username="aulaforex" sheetname="Simulacion_1000"/}
```

Anyway, to embed the sheet on your site it needs to be public.

Zoho Sheets have functionality to share the sheet only for appropriate users (and not make it public) but this functionality works in other way (it uses email invitations) is not supported by Ari ZohoSheet plugin.

I put the code

```
{arizohosheet urlorname="true" username="fiestamagna" sheetname="programa_puntos"}
```

<http://img190.imageshack.us/i/zohoiframe.jpg/>

and show me the sheet like a iframe but I want show me getting content via Zoho user name and sheet name.

What is the problem? I tried all possibilities and forever work like a iframe <http://www.ari-soft.com/images/fbfiles/images/zohoiframe.jpg>

Hello,

It was a bug with loading sheet by user name and sheet name, but we fixed it. Download the component in 'Member Area' on our site and re-install it, please.

PS: In any case plugin embeds iframe to page for showing sheet.

Regards,
ARI Soft

Perfect!

Thank U!
