
Parameters don't work in arijdatatable

Posted by supriya2497 - 2010/11/30 10:01

Hi,

I installed com_arismartcontent.zip version 1.7.5 without problem. I tried arimootable with various parameters such as height, minColWidth, filter, resizable, sortable, and everything worked as expected. However, the rows are too squeezed up in Firefox, so I changed to arijdatatable which gave nicely-spaced rows. But then the parameters don't come into effect at all. I want to include just a few basic parameters like bPaginate, bFilter and bSort. I just get a very plain table with no sorting, filtering functions whatsoever. Why is this?

Please help! I'd really appreciate any advice.

Thank you,
Supriya

Hello,

Could you provide plugin code which you use and "ARI JDataTable" plugin settings or temporary access to your Joomla! backend and link to page where we can see this problem by email?

Regards,
ARI Soft

Hi, ARI Soft,

Thank you for responding so quickly. I looked at the html code again very carefully and discovered a silly typo error with one of my brackets (typing '[' instead of ']'). I corrected the error and the plugin now works beautifully.

Thanks for a great extension!

Regards,
Supriya
