
CSV table help

Posted by jcharlesworth - 2010/12/03 17:09

I'm new to both joomla and Smart Content and am trying to learn the CSV table plugin.

I copied the sample data and code from the examples, created the csv file, changed the file location, but am still not able to generate the table.

Any help would be greatly appreciated.

Hello,

Could you provide link to page where we can see this problem? If it is private, you can send it by email.

PS: If you use WYSIWYG editor and insert plugin code with help copy-paste method, switch editor to plain text mode before inserting code because in design mode editor can add extra HTML code which can break plugin code.

Regards,
ARI Soft
