
smartcontent and php

Posted by luisa - 2010/12/30 02:06

I am trying to insert a fancy box and some smart content into a html.php file. Following the example in the plugin I have this below

beginning php code

```
{arijfancybox width="350" height="200" title="Services"}
{arijfbicontent}
    Click here to add Services
{/arijfbicontent}
{arijfbcontent}
```

lots more php code

```
{/arijfbcontent}
{/arijfancybox}
```

It is not working. All I am getting is the code itself showing up on the page and not the fancybox

I have the plugins installed... did I miss something?

Cheers
Luisa

Hello,

Could you provide link to page where we can see this problem and temporary access to your Joomla! backend by email that we can investigate this issue?

Regards,
ARI Soft
