Hi, I try to use the ARI Smart Content, for searching of one field in a table and then seeing the result in a table. How I can do?

thank's marco

Re:Search in db and view a Table

Hello,

May be ARI JDataTable is suitable for you. But it search in HTML table on page, not in database.

Regards, ARI Soft

No... I need to search in a DB.

and now ?

:(

Do you have table with large data or not ? If not then you can select all data with help ARI SQL Table and wrap it with ARI JDataTable. If you have table with large data and you need the component only for search in database we can provide refund.

Regards, ARI Soft

I have a db with 8000 record.

Yes, I need the component only for search in database.

I'm sorry, if you can provide refund, I'm very happy.

:-)

thank's

Re:Search in db and view a Table Posted by admin - 2009/01/27 21:36

We have provided refund.
