## jQuery template options

Posted by cplath - 2009/04/10 01:54

---

Thanks for the great product! I'd like to see a couple more features related to jQuery templates:

Add templates

It would be great to be able to add custom jQuery templates for selection in the UI Loader plugin

No template option

Being able to select no template would also be nice. Currently you have to override any settings in the CSS templates. It would be nice to have no template and inherit styles from the Joomla template instead. Then additional styles could be defined in the Joomla template CSS or the component CSS templates.

The no template option would be nice for ALL plugins as well, not just those using the UI Loader.

Thanks

Hello,

1) We are going to add this possibility in one of the future releases.

2) We think that it isn't good idea because most plugins needs some CSS file (template) by default because it defined some css properties for correct plugin layout.
