ARI JDataTable: sort single column

Posted by nvanstrien - 2012/07/20 10:58

———————————————————————

To begin with - thank you for developing the ARI JDataTable plugin. It saves a lot of development time and has a cool look!

One feature I miss a bit is the ability to filter data in a single column or a selection of columns. It would be a great feature if you can define in the
{arisqltablecolumns} tag if a column should have a dropdown filter. The values should be generated from the data in the column.

Would be great if this was possible.

Thanks,

Niels
