
Alternate rows, different colors after sort

Posted by twarfield - 2010/07/18 17:29

Thanks for the tip in Re:sqltable theme and Re:New Style for ARI SQL Table, but after you sort on a column the alternate pattern gets clumped up. See <http://www.warfieldconsulting.com/jdata-table-test.html> and click on "url" column header to sort.

Would it be possible to preserve alternate row coloring after a sort?

'ARI JData Table' plugin uses "odd" and "even" CSS classes for odd and even rows in a table. Solution which you have found is acceptable for static table. For 'ARI JData Table' plugin, use the following CSS rules:

```
table tbody tr.odd td {  
    /* background color for each odd row */  
    background-color:#F0F0F6;  
}
```

```
table tbody tr.even td {  
    /* background color for each even row */  
    background-color:#FFF;  
}
```

Regards,
ARI Soft
