## ARI JNewsSlider - don't change URL

Posted by twarfield - 2010/07/18 17:45

---

JNewsSlider is very cool but it seems to rotate the URL - for example, go to  
<http://smart.ari-soft.com/ari-jnews-slider-plugin.html>  
... after a few seconds it changes to  
[http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans\\_2](http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans_2)  
... then  
[http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans\\_3](http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans_3)  
... then  
[http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans\\_1](http://smart.ari-soft.com/ari-jnews-slider-plugin.html#jans_1)  
... and the cycle repeats.

This makes the "Back" button inoperable. Could this component be implemented in the same way as JEasySlider, which doesn't change the URL?

Hello,

Thanks for your suggestion, we'll respect it in a future release.

Regards,  
ARI Soft

Is this still the case using this plugin or the tabview or do you have a solution for it?

Thanks in advance

Download and upgrade the extension. After this clean browser's cache. New version of the plugin contains "Use hash links" parameter. Set the parameter to "No".
