## ARI JNewsSlider - automatic switching of articles

Posted by onieli121 - 2009/01/10 10:17

---

It would be very, very nice to have ARI JNewsSlider have the ability to automatically scroll to another article in the assigned set. That way, it can be used as a dynamic newsflash sort of component.

---

The feature is implemented. Now ARI JNewsSlider has auto-rotate feature.

Two options are responsible for this functionality:

- rotate - Set up an automatic rotation through tabs of a tab pane. Values: milliseconds;
- stopRotate - Stop rotate after user action. Values: true, false;

The latest version of component can be downloaded in member area.

Is there any way that I can install the plugin without having to uninstall everything and reinstall it?

---

Yes.

You can extract com\_arismartcontent/install/plugins/content/%plugin\_name% to some folder and then go to Components -> ARI Smart Content -> Plugins and install plugin indicating this folder. %plugin\_name% here is the name of plugin you want to install.

But probably the faster and easier way is to uninstall/install the component.

Thank you. I figured that was how I did it. Thanks alot and I submitted my vote for you guys. This was my first payed

---

component and I am very impressed thus far.
