
top menu display truncation

Posted by sonoerin - 2011/01/31 21:23

I am very much a noobie with ARI YUI Menu, and somewhat with Joomla.

I am trying to use this with Joomla 1.5 and with my template I see that the horizontal topmenu only displays the top two menu items. With other templates I have tried, the full menu displayed. I tried adding

```
body #breadcrumbs
{
  overflow: visible;
}
```

to the CSS Styles in the module configuration but it doesn't seem to help. I would greatly appreciate any help you can offer. If you want to see the behavior, the site I am helping out with is:<http://www.denvernotredame.org/home>

Hello,

Use the following CSS rule:

```
#pillmenu .yuimenu ul
{
  height: auto;
}
```

We don't have list of issue because these are not the module issues, usually this problem with site template styles (it depends on module position) or 3rd party extensions.
