
Choose between ARI Ext Menu and ARI YUI Menu

Posted by oorzaak - 2011/02/28 10:56

Hi there, I'm new to the ARI extensions for Joomla. Can anyone please explain the differences between ARI Ext Menu and ARI YUI Menu? When should I choose one or the other? I suppose there are differences, why else would there be two extensions, yet I cannot find out what the differences are.

Cheers, Frits

Hello,

These two extensions have different UI. "ARI YUI Menu" can show sub-menu items in scrolling view, it also can show sub-menu in appropriate position (top, left, bottom or right, it depends on free space around menu).

Regards,
ARI Soft

Thanks for replying so quickly. I think I'll pick the YUI Menu then.

Cheers, Frits
