ARI YUI Menu / encode home page url

Posted by aadr - 2011/02/28 11:06

_____

Hi having problems with the away the home page url is encoded in the ARI YUI Menu .

The first time I load my site (main page http://localhost/Joomla15) I get the URLÒ's right from the others modules

like this :
http://localhost/Joomla15/index.php?option=com_content&view=article&id=34:16-equipas&catid=23:a-volta-da-volta

When a click in the link to view the article and afterÒ's when i return to the home / clicking in Home in ARI YUI Menu, the home page now as the following url (encode by ARI YUI Menu) :
http://localhost/Joomla15/index.php?option=com_content&view=frontpage&Itemid=1

Now others modules are getting the links all mess up and donÒ't work , like this :

http://localhost/Joomla15/index.php?option=com_content&view=article&id=34%3A16-equipas&catid=23%3Aa-volta-da-volta&Itemid=1

can you help me please how to correct this ??...

_____

Hello,

We can help, if we have ability to investigate this issue. Is it possible to see the issue and have temporary access to Joomla! backend?

Regards,
ARI Soft

_____

Sorry no, IÒ'm using my pc (localhost) with xampp ..

I could send a zip of my joomla folder and export.sql of my tables ...

and some document how to recreate the situation ....

Thanks again
Roque

_____

You can use Akeeba Backup extension that create backup of your Joomla! site.

_____

canÒ't attach the (tried 2 times) site-localhost-20110301-104502.jpa

backup file .. is because is 11 MB ?

IÒ'm attaching a doc how to recreate the problem http://www.ari-soft.com/images/fbfiles/files/On_start.doc

_____

You can upload backup to free files share service. For example to MediaFire and send download link by email.

Regards,
ARI Soft

_____

thank you for your patience with me .

where is the link
http://www.mediafire.com/?5vi2m88xws3qfff

at you module at class.JoomlaUtils.php you will find my modest "work around" marked with "Roque"

Again thank your for bearing with me.

Roque
