
another submenu hiding behind content

Posted by jlizard - 2011/03/02 04:08

Hi, Tried to find a solution in the other posts regarding this problem (z-index, etc.), but it seems to be something specific to my CSS.

My site is on a localhost. I'm brand new to Joomla: if I just send you my template files, will that be enough?

Many thanks. Your replies to others have been exquisitely patient and helpful.

Hello,

Send page files by email please. This process is described here.

Regards,
ARI Soft
