
ARIYOU menu doesn't know J1.6 extra user levels

Posted by fribse - 2011/03/03 16:24

I've defined extra user groups and access levels, but the menu will not display them, even though it is selected in the config.

Standard menu do work properly, as well as other menus that are 1.6 compatible.

Hello,

The module doesn't support special access levels. This ability will be added into a future release.

Ok, so the label "1.6 Native" is a stretch.

That's the main difference between 1.5 and 1.6.

JED provides ability to set the following values for "Compatibility" field:

- 1.0 native
- 1.5 legacy
- 1.5 native
- 1.6 native

"1.6 native" means that extension can be installed and run on Joomla! 1.6.
