J1.6 menu hidden

Posted by Bikerman - 2011/03/09 23:11

_____

Hi,

I've started to create a new site using Joomla 1.6. Having used your menu before I wanted to use it on the new site. The problem is that the main content on the page is hiding the menu sub-levels. The site template is one I created myself using Aristeer (if that helps).

Site - www.bikerman.co.uk

Any help gratefully accepted.

Best wishes
Chris.

_____

Hello,

Add the next CSS rules:

body .art-content-layout .art-sidebar1
{
 position: relative;
 z-index: 10;
}

body .art-content-layout .art-content
{
 position: relative;
 z-index: 1;
}

Regards,
ARI Soft
