
link to another item menu

Posted by aadr - 2011/03/11 11:40

Hi IÒ'm having a problem when a set a menu item (type menulink) that points to another mainmenu menu item .

the Ari Yui menu is encoding the id of the menu item, not the "another mainmenu menu item id "

IÒ'm attaching a doc with some picture to show the problem <http://www.ari-soft.com/images/fbfiles/files/menuitem.doc>

I have created a backup of my site at mediafire where is the link

<http://www.mediafire.com/?9j541j8t0br3k6g>

I forgot to say that backup is made using AKeepa backup

Thank for your help.

I think I have done a work around , in the menu.html.php file near the 110 line a put a if around this code

```
if ($menuitem->type != 'menulink' and $menuitem->type != 'alias')
{
    $router = JSite::getRouter();
$link = $router->getMode() == JROUTER_MODE_SEF ? 'index.php?Itemid=' . $menuId : $link . '&Itemid=' . $menuId;
}
```

Hello,

Is it required to investigate this issue or now the module works fine?

Regards,
ARI soft

it's working, but I think you could investigate this issue to see if really need some correction in the code .

thank Roque
